## ACKNOWLEDGEMENT

**FabTruck Application** is the project of many hands from the team. Our tribute for the successful completion of the project goes to all those who helped through their constant guidance and encouragement. The satisfaction that accompanies the success would be incomplete without thanking the person who made it.

We are thankful to our beloved Principal **Dr.KAMALA YC**, who encourages us to come with new and innovative ideas and for providing the environment with all facilities for completing the project.

We are also grateful to our Head of the Department **Prof. SHALINI C** Department of computer science for her valuable guidance and constant support during our project development.

We are also grateful to our project guide **Prof. VARADARAJ R**, Department of computer science for his valuable guidance and constant support during our project development.

A special thanks to **MUTHURAM GOVINDARASU**, CEO and Founder of Indigeneous Tech Private Limited, Bangalore-32 with 10 years of experience in Blockchain for his valuable guidance and technical support for our project.

We extend our thanks to all our teaching staffs of the department of computer science. Finally, we thank one and all who helped us directly and indirectly for the completion of our project

**Table of Contents**

I) Project Goal (Problem Statement)..... 6

II) Solution Proposed..... 7

III) Input Data and Verification..... 9

IV) Project/ Solution (FabTruck) Design..... 10

V) Tools/ Technologies Used..... 12

VI) Project Team Members..... 12

VII) Referenced Documents:..... 13

VIII) Project / Solution Setup..... 13

1) Account and EC2 Instance creation and connection ..... 13

    a) Create an AWS free account and further create an EC2 instance with Ubuntu Operating System ..... 13

    b) Connect to the AWS EC2 Instance through “Putty” Software and open the Terminal. Change over to “root” directory with Admin permissions ..... 13

2) Download the required pre-requisite tools and Software into the EC2 Instance, transfer the “FabTruck” Project files from Windows System to EC2 Instance using “FileZilla” and setup the project in the EC2 Instance ... 13

    a) Download and install all the pre-required tools and software for the Hyperledger Fabric based Blockchain set-up in the created EC2 Instance ..... 14

    b) In the EC2 instance, clone the “fabric-samples” directory, download and install the Hyperledger Based Blockchain Binaries Version 1.4.6 and download the Hyperledger based Docker images from Docker hub. .... 14

    c) Transfer these program and files from Windows System to the created AWS EC2 Instance using the “FileZilla” software ..... 14

    d) Go to “FabTruck-network” directory and create Cryptographic based certificates and update the “docker-compose.yaml” file with the relevant CA certificate and save the file 14

    e) Create a directory “channel-artifacts” and create genesis.block and channel.tx files under that directory and verify. Covert the “start.sh” file into an executable file ..... 14

    f) Go to “FabTruck” directory and covert the “startFabTruck.sh” and “teardownFabTruck.sh” files into executable ones ..... 14

    g) Execute the command “npm install” and verify the creation 969of “node\_modules” directory ..... 14

IX) Project / Solution Execution ..... 14

    1) In the “FabTruck” directory, execute the command “./StartFabTruck.sh” command and verify that the Blockchain Network is up and deployed ..... 14

    2) Execute the command “node enrollAdmin.js” and verify that the “Admin” is enrolled successfully ..... 17

    3) Execute the command “node registerUser.js” and verify that the “user1” is registered and enrolled successfully ..... 18

4) Execute the command “node query-All-Truck.js” and verify that the all the Truck data stored inside the blockchain are read and displayed successfully.....	18
5) Execute the command “node query-Truck4.js” and verify that the Truck4 details are read from the blockchain and displayed successfully .....	19
6) Execute the command “node invoke-Truck10.js” and check that the Truck10 has got stored into the blockchain successfully .....	19
7) Execute the command “node query-Truck10.js” and check that the Truck10 data is read from the blockchain and displayed successfully .....	19
8) Execute the command “node invoke-Truck10-Owner-change.js” and check that the new owner of Truck10 has got stored into the blockchain successfully .....	20
9) Execute the command “node query-Truck10.js” and check that the Truck10 data is read from the blockchain and displayed successfully with new Truck owner .....	20
<b>X) Setup and loading of “FabTruck Frontend”.....</b>	<b>21</b>
1) Open the “/FabTruck-front/src/App.js” file and update the Public IP address of the FabTruck EC2 Instance and save the file.....	21
2) From the “FabTruck” directory, execute the command “node FabTruck-backend.js” and verify the display of “Listening on port 4001”.....	23
3) Create the duplicate session of the EC2 Instance, navigate to “FabTruck-front” directory in that instance, execute the command “npm run start” and verify the successful starting of the React App Development Server .....	24
4) Load the “FabTruck-frontend” onto the Chrome browser by using the url: “http://Public IP of the Instance:3000/ and verify the successful display of the FabTruck frontend .....	25
<b>XI) Interaction with the FabTruck Blockchain Network using FabTruck Frontend from Windows System Browser .....</b>	<b>27</b>
1) Click on “QUERY ALL” option and then “SEARCH ALL” button .....	27
2) Click on QUERY, enter Truck4 and then click on “SEARCH” button.....	28
3) Click on CREATE option, enter the new Truck details and then click on “CREATE” button.....	28
4) Click on QUERY option, enter Truck11 and click on “SEARCH” button .....	30
5) Click on TRANSFER option, enter Truck11 for Truck ID and Prakash for New Owner and then click on “TRANSFER” button .....	30
6) Click on QUERY option, enter Truck11 and click on “SEARCH” button .....	32
<b>XII) Closing of “FabTruck” Project .....</b>	<b>32</b>
<b>XIII) Project Summary .....</b>	<b>36</b>
