**GUIDELINES FOR CHEMICAL DISPOSAL**

1. Acids and Corrosive chemicals are neutralised with soda ash or sodium bicarbonate or alkali.
2. Mixed organic solvents are separated by fractional distillations in the laboratory and reused depending on purity / suitability.
3. Broken glass wastes are collected separately and send for recycling.
4. Excess solutions in the lab are stored in containers and are to be reused.
5. Concentrated acids are diluted to 1:10 ratio with water and disposed.
6. Solid chemical wastes must be collected in poly bags separately and tie its mouth before disposal.
7. Don't mix unknown chemicals together at the time of disposal.
8. Water reactive materials (e.g. sodium) should be kept away from water sources.
9. Solvents must be separately collected in plastic or metal containers, e.g. benzene, ether, ethyl acetate, acetone, alcohols, hydrocarbons, etc.
10. Non-toxic basic waste with a  $\text{pH} < 10$  can be disposed into the drain with copious amounts of water.
11. Fill all non-sharp solid waste in garbage bags. Please use high quality, thick garbage bags that don't tear easily. The filled bag must be tied off so that the waste cannot leak or spill out.
12. Before disposal ensure that the solvent wastes bottles/cans are tightly sealed
